# **Practical-10**

# Orchestration of ML project containers using Kuberenetes

The objective of this lab is to introduce you to the fundamentals of orchestrating applications with Kubernetes. You will learn how to define, deploy, and manage containerized applications using Kubernetes manifests.

# Lab Steps:

**Step 1:** Verify Kubernetes Cluster Ensure your Kubernetes cluster is up and running by checking the cluster nodes

```
PS D:\Desktop\stream> kubectl get nodes

NAME STATUS ROLES AGE VERSION
docker-desktop Ready_ control-plane 22m v1.27.2
```

Step 2: Define a Deployment using YAML manifest and apply the deployment to your cluster

```
deployment.yml
      # deployment.yaml
      apiVersion: apps/v1
      kind: Deployment
      metadata:
      name: ml-deployment
      spec:
        replicas: 3
        selector:
          matchLabels:
            app: ml-app
        template:
          metadata:
            labels:
              app: ml-app
          spec:
            containers:
             - name: ml-container
              image: your-ml-image:tag
 19
              ports:A
              - containerPort: 8080
```

Apply the deployment:

20012531035 SHIVAM VYAS

MLOps CEITA(7A-4)

```
PS D:\Desktop\stream> kubectl apply -f deployment.yaml deployment.apps/ml-deployment created
```

Step 3: Describe Deployment

```
PS D:\Desktop\stream> kubectl describe deployment ml-deployment
                       ml-deployment
Name:
Namespace:
                        default
CreationTimestamp:
                       Thu, 23 Nov 2023 18:58:29 +0530
Labels:
                        <none>
Annotations:
                       deployment.kubernetes.io/revision: 1
Selector:
                       app=ml-app
                        3 desired | 3 updated | 3 total | 0 available | 3 unavailable
Replicas:
StrategyType:
MinReadySeconds:
                       RollingUpdate
RollingUpdateStrategy: 25% max unavailable, 25% max surge
Pod Template:
  Labels: app=ml-app
  Containers:
  ml-container:
    Image:
                 your-ml-image:tag
                 8080/TCP
    Port:
    Host Port: 0/TCP
    Environment: <none>
    Mounts:
                 <none>
  Volumes:
                 <none>
Conditions:
  Type
                Status Reason
              False MinimumReplicasUnavailable
  Available
  Progressing
                True
                        ReplicaSetUpdated
OldReplicaSets: <none>
NewReplicaSet: ml-deployment-5fcc5656fc (3/3 replicas created)
Events:
                                   From
                                                         Message
  Type
          Reason
                            Age
 Normal ScalingReplicaSet 24s
                                  deployment-controller Scaled up replica set ml-deployment-5fcc5656fc to 3
```

**Step 4:** Expose Service

```
# service.yaml

1  # service.yaml

2  apiVersion: v1

3  kind: Service

4  metadata:

5   name: ml-service

6  spec:

7   selector:

8   app: ml-app

9  ports:

10   - protocol: TCP

11   port: 80

12   targetPort: 8080

13  type: LoadBalancer
```

20012531035 SHIVAM VYAS

MLOps CEITA(7A-4)

#### Step 5: Access the Service

```
PS D:\Desktop\stream> kubectl apply -f service.yaml service/ml-service created
```

# **Step 6:** Scale Deployment

PS D:\Desktop\stream> kubectl scale deployment ml-deployment --replicas=5 deployment.apps/ml-deployment scaled

#### **Step 7:** Update Deployment

```
deployment-updated.yaml
 2 apiVersion: apps/v1
 3 kind: Deployment
     metadata:
     name: ml-deployment
     spec:
      replicas: 3
      selector:
 8
       matchLabels:
           app: ml-app
      template:
         metadata:
           labels:
            app: ml-app
         spec:
          containers:
           - name: ml-container
             image: your-updated-ml-image:tag
             ports:
             - containerPort: 8080
```

#### **Step 8:** Rollout Status

PS D:\Desktop\stream> kubectl rollout status deployment ml-deployment
Waiting for deployment "ml-deployment" rollout to finish: 1 out of 3 new replicas have been updated...

#### **Step 9:** Rollback Deployment

PS D:\Desktop\stream> kubectl rollout undo deployment ml-deployment deployment.apps/ml-deployment rolled back

### Step 10: Delete Resources

```
PS D:\Desktop\stream> kubectl delete deployment ml-deployment deployment.apps "ml-deployment" deleted
PS D:\Desktop\stream> kubectl delete service ml-service service "ml-service" deleted
```
